# UNIVERSITY OF TECHNOLOGY NORTH BANGKOK

## EDUCATION QUALITY STANDARDS

To create proficient and innovative human resources to meet the labor market demand at ASEAN and international levels, King Mongkut's University of Technology North Bangkok (KMUTNB) uses the outcome-based education approach for curriculum implementation. We have adopted the educational standards such as Accreditation Board for Engineering and Technology (ABET) for engineering programs and ASEAN University Network Quality Assurance (AUN-QA) for the other programs in the university. These educational quality standards are believed to be an important and useful tool for maintaining and enhancing the educational management to international quality standards. In addition, KMUTNB encourages all the programs to be accredited by the international educational standard agency in order to demonstrate the potential of the university in bringing Thai education to international recognition and strengthening the ability to compete internationally.
